

Simplify the Equations for the Variable y

$$4(-11y + 11x) = 88$$

$$6(24x + 19) = 42 - 72y$$

$$48x = 8(-3y - 24)$$

$$6(-16x + 20) = -24y + 24$$

$$-80x = 8(14 + 2y)$$

$$8(14y - 14x) = 112$$

$$5(-8x - 2y) = 120$$

$$10x = 5(-2y - 6)$$

$$3(19 - 9x) = -9y + 39$$

$$5(18 - 16x) = 70 - 20y$$
